Welcome to the Latest Edition of Warpp Connect

In this edition of our newsletter, you'll find an overview of our journey in purposeful innovation, along with key highlights of our products and initiatives. We explore how innovation guided by intent is shaping the way we design, build, and grow. This issue also touches on the importance of sustainability and green manufacturing, offering insights into how responsible practices are becoming central to today's industrial landscape.

Welding Positioner

Engineered for excellence, our Welding Positioners deliver exceptional control, stability and accuracy for circular welding applications. Designed to optimize workpiece positioning, they enable ideal welding angles, resulting in superior weld quality, improved consistency, and enhanced operational efficiency.

Built with robust construction and advanced drive technology, these positioners support smooth, vibration-free rotation even under heavy loads, making them a reliable choice for demanding industrial environments.

Key Features

- Heavy-duty slotted faceplate for secure and flexible job mounting
- Integrated copper earth brush system ensuring uninterrupted welding current
- Digital RPM display for precise and repeatable speed control
- High-performance sleeve bearings in models above 300 kg for durability and long service life
- AC motor with reduction gearbox and VFD for controlled, smooth rotation

Why Choose WARPP's Welding Positioners?

- Wide Load Range: Reliable performance from 50 kg to 10,000 kg
- Precision Rotation: Smooth speed control for accurate, consistent welding
- Flexible Tilting: Manual, motorized, or hydraulic options for every application
- Optimal Positioning: Tilting up to 90° / 120° for superior weld quality
- Easy Integration: Compatible with single- and three-phase (50 Hz) power

Our Welding Positioners are designed to meet the highest standards of precision, reliability, and productivity, making them an essential asset for modern fabrication and welding operations.

Stronger arcs, cleaner welds.

Upgrade to our tungsten electrodes built to perform.

Sustainable welding practices and green manufacturing

Sustainable welding practices are becoming an important part of green manufacturing as industries work to reduce their environmental impact. Traditional welding can consume large amounts of energy and materials while producing fumes, waste, and emissions. By adopting more sustainable approaches, manufacturers can improve efficiency while protecting both workers and the environment.

One key aspect of sustainable welding is energy efficiency. Using advanced welding technologies such as inverter-based welding machines and automated systems helps reduce power consumption and material waste. Choosing the right welding process for each job also minimises excess heat and metal use, leading to lower emissions and fewer defects. In addition, proper maintenance of equipment ensures consistent performance and avoids unnecessary resource use. Green manufacturing also emphasizes safer materials and cleaner work environments. Using low-fume welding consumables, improving ventilation, and recycling scrap metal reduce pollution and health risks. When combined with proper training and planning, these practices support long-term sustainability without compromising product quality. Overall, sustainable welding plays a vital role in building a cleaner, more responsible manufacturing industry. Another important factor is responsible resource management.

Recycling leftover metal, optimising joint design to reduce filler material, and extending equipment life through proper maintenance all contribute to sustainability. When companies combine these practices with training and environmental awareness, welding becomes an integral part of green manufacturing, supporting both economic growth and environmental protection.

We're Participating at the Steel Fab 21st Edition from 12th of January to 15th January 2026 at Sharjah Expo Centre.
Hall no 3, Booth 1516

BEYOND *Business*

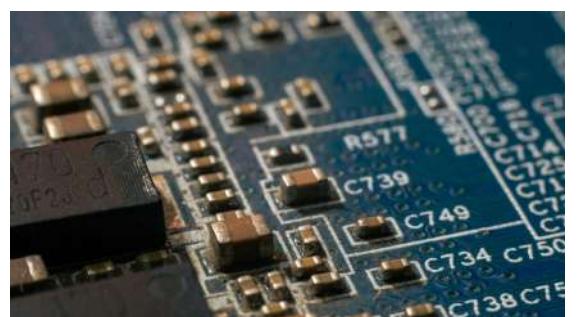

The Power of Purposeful Innovation

Innovation has always driven progress, but when guided by a clear purpose, it becomes a powerful force for meaningful change. Purposeful innovation focuses not only on creating something new, but on solving real problems and improving lives. It aligns creativity, technology, and values to deliver solutions that benefit individuals, organizations, and society as a whole. In today's fast-changing world, businesses and institutions face complex challenges such as climate change, social inequality, and resource scarcity. Purposeful innovation

addresses these issues by putting human and environmental needs at the center of design and decision-making. Whether it is developing sustainable technologies, improving access to education, or enhancing healthcare systems, innovation with intent creates long-term value rather than short-term gains. Innovation has always been a driving force behind progress, but its true strength is realized when it is guided by purpose. Purposeful innovation goes beyond novelty and technology; it is about creating solutions that address real-world challenges and deliver lasting value. By aligning creativity with responsibility, it enables meaningful advancements that benefit businesses, communities, and the environment. In a world facing rapid change and increasing complexity, purposeful innovation helps organizations respond thoughtfully to emerging needs. From sustainability and efficiency to inclusivity and resilience, innovation rooted in purpose ensures that growth does not come at the cost of long-term well-being. It encourages smarter design, ethical decision-making, and a focus on outcomes that matter.

We at Warpp have always believed in purposeful innovation as the foundation of everything we do. By focusing on solutions that create real impact, we strive to build technologies and practices that are responsible, forward-looking, and meaningful. The true power of purposeful innovation lies in its ability to inspire collaboration, build trust, and shape a better future.

Our all new **GlyCool** coolant will soon be available on E-Store

Vote of Thanks to all our readers

“

As we reflect on 2025 so far, it's been a truly kind year for us. We take a moment to express our heartfelt gratitude to you, our readers - who have actively engaged with our content, shared thoughtful feedback and connected with us across all our social media platforms. Your continued support and interaction have truly enriched our journey and inspire us to keep delivering content that matters. Thank you for being an integral part of our community.

B2B brands are often perceived as less visible, with a reputation for keeping a low profile. We decided to challenge that notion and experimented with actively showing our presence and what a journey it has been! From sharing insights to engaging with our audience, every step has been a learning experience that's enriched our perspective and strengthened our connections. It's been rewarding to see how openness and engagement can transform the way a B2B brand connects with its community.

Testimonial

“

Mr. VIVEK SARAK
MAVI ENGINEERS

Mavi Engineers recently purchased 2 CNC profile cutting machines and 7 welding machines, and we are extremely satisfied with the overall performance and quality. The machines are robust, precise, and user-friendly, significantly improving our production efficiency. Installation and commissioning were smooth, and the technical support team was knowledgeable and responsive. We appreciate the timely delivery and professional service. Highly recommended for industries looking for reliable fabrication equipment.

Mr. Rahman Habibur
Production Manager

”

Myself M.H.Rahman working in Warpp Engineers since 8 years as a production manager. As a production team we would like to see 200 Crore company in next 5 years. We would like to share one thing which is transparancy. Warpp is transparent to everyone, with employees, dealers & customers , which is very big thing. That is why company is growing day by day.Thank you.
